6x6 Seal Plate

NEMA 4 Flanged Hinged Lay-in Wireway

Application

EPI NEMA 4 JIC Flanged, Hinge Covered Lay-in Wireway are designed to protect electrical wiring in areas, which may be regularly hosed down or are very wet. Suitable for use outdoors, or in dairies, breweries and similar installations. This design allows for wire and cable to be installed by "laying-in" rather than by pulling-through the wire. A complete selection of sections and fittings are available in 4X4, 6X6, 8X8, 10X10, and 12X12 sizes.

Construction

Made from 16 or 14-gauge steel. The end flanges are made from 12-gauge steel. All seams are continuously welded and there are no holes or knockouts. All sections and fittings have smooth rounded edges to prevent damage to insulation. The covers have gasket with oil resistant adhesive. Stainless steel butt hinges and external stainless steel screw clamps assure complete seal between covers and bodies (Covers not to exceed 72"). A solid oil resistant gasket is positioned between flanges when sections and fittings are bolted together.

Finish

The standard finish is Sherwin Williams ANSI-70 light-dove gray inside and out. Clamps and screws are stainless steel. Additional finishes are available.

Industry Standard

Meets National Electrical Manufacturers Association (NEMA) standard for Type 4 (Water Tight and Dust Tight), Type 12 (Industrial Use) and Type 13 (Oil Tight and Dust Tight) enclosures. Also conforms to the Joint Industrial Council (JIC) EGP-1-1967.
