NEMA 4X Flanged Hinged Lay-in Wireway

Application

EPI NEMA 4X JIC, Flanged, Hinge Covered, Lay-in Wireway is designed to protect electrical wiring in areas, which may be regularly hosed down or are very wet. Designed for use in areas where serious corrosion problems exist. Suitable for use outdoors, or in dairies, breweries, petrochemical plants, food processing plants, sewage plants, water treatment plants, packing plants, and similar installations. This design allows for wire and cable to be installed by "laying-in" rather than by pulling through the wire. A complete selection of sections and fittings is available in 4X4, 6x6, 8x8, 10x10, and 12x12 sizes.

Construction

Made from 16 gauge stainless steel (Type 304 2B). The end flanges are made from 12-gauge stainless steel. All seams are continuously welded and there are no holes or knockouts. All sections and fittings have smooth rounded edges to prevent damage to insulation. The covers have oil resistant gasket with oil resistant adhesive. Stainless steel butt hinges and external stainless steel screw clamps assure complete seal between covers and bodies (Covers not to exceed 72"). A solid oil-resistant gasket is positioned between flanges when sections and fittings are bolted together.

Finish

The standard finish is Type 304 2B Stainless Steel. All corners are ground smooth, polished and free of sharp edges. Type 316 Stainless Steel is also available.

Industry Standard

Meets National Electrical Manufacturers Association (NEMA) standard for Type 4 (Water Tight and Dust Tight), Type 4X (Water Tight, Dust Tight, and Corrosion Resistant) and Type 12 (Industrial Use) enclosures. Also conforms to the Joint Industrial Council (JIC) standard EGP-1-1967.
