## Standard Sizes

Width	Height	Depth	Gauge	Ampacity
36	36	12	14	200-600 Amps
42	42	12	14	601-1600 Amps
48	48	12	14	601-1600 Amps
54	54	15	12	1601-2400 Amps
60	60	15	12	Over 2400 Amps

## NEMA 3R AEP CT Can

### Application

EPI NEMA3R AEP CT Cans are used to protect CT's in outdoor installations. Designed to protect the enclosed equipment against rain and sleet; may be used indoors where dripping water is a problem. This design conforms to AEP standards for CT Enclosures.

### Construction

Made from 14-gauge steel. CT Cans wider or taller than 48" are made from 12-gauge galvanized steel. A drip shield top and smooth seam-free sides, front and back prevents rain, snow or sleet from entering the enclosure. A 3-point latching mechanism, operated by an oil-tight locking handle, holds the door securely closed. The continuous stainless steel hinge cover is securely fastened with welds along the opposite side. All double doors have a door stop mechanism. No gasket is provided. A steel CT panel is provided which can be installed vertically or horizontally. A full plywood back panel is available upon request. Knockouts are not available.

### Finish

The standard finish is a Sherwin Williams ANSI-70 light-dove gray enamel finish inside and out applied to a minimum thickness of 3 mil. Also available in Aluminum and Stainless Steel.

### Industry Standard

Meets National Electrical Manufacturers Association (NEMA) standard for Type 3R (Rainproof and Sleet-Ice resistant) enclosures.
